

PURE AIR
CLEAR VISION

A patented product from  **elis**
CLEANROOM

Step into a new era of cleanroom innovations for sterile manufacturing with ElisAir!

Operators face many challenges in today's cleanroom environments. Separate goggles limit visibility and personal glasses fog up easily, causing discomfort. Skin exposure complicates contamination control, while air quality concerns make long workdays very challenging.

ElisAir is an all-in-one air ventilated garment system. It enhances air quality, visibility, and comfort, ensuring smoother operations in the cleanroom.

How does it work?

Utilizing a controlled laminar airflow mechanism, the air device extracts clean air from the controlled environment and evenly distributes it in front of the operator.

The exhaled CO2 accumulates and is pushed downward, preventing the operator from inhaling it again. The airflow within the garment is carefully directed through the fabric barrier in a controlled manner. All verified through technical testing.

Regulated air changes to ensure the comfort of the operator

Panoramic visor for wide vision while enhancing communication capabilities

Simplified aseptic gowning

 Swiss design
