

# covers

PROTECT MORE, WASTE LESS

An innovation of 

# Sustainable protective barrier for your equipment: reusable, launderable and cost-effective.

Reusable covers offer a cost-effective and eco-friendly alternative to disposable materials. Easy to implement and tested in multiple countries, these covers provide a proven solution for maintaining cleanliness and sustainability.

Our customised covers are designed for various operations, including equipment protection and internal sterilisation of tools and machinery. Additionally, we offer cleanroom laundry services depending on your needs.

## How does the product defining process work?

Together, we define your needs and customise every detail; measurements, fabric, colour, accessories, closures, and more. There are endless possibilities.

**Our solution is fully tailored to meet your specific requirements.**

After a prototype is ordered, we carefully evaluate the fitting and make any necessary adjustments.

Once the cover meets all requirements, we work with you to define the best folding method and daily handling process between your team and Elis Cleanroom.

With everything finalised, you're ready to place your order!
